PROJECTS

I_Vocabuilder(Android Application)

Individual Project (Jan 2021-Dec 2021)

This project was made as a part of an academic task. The task is to design a system that can enrich our vocabulary by using this app. This project is completed using **JAVA** and by using various features and functions such as **inheritance**, **abstraction**, **polymorphism**, **file handling**, **class**, and **exception handling**. In this application, we use Firebase as a database where all data are being stored. We use many types of dependencies to develop this app. The project was successful and we learned to solve real-world problems using programming language.

JUST_Info(Android Application)

Individual Project (Sep 2018-Dec 2018)

This project is about JUST which can store details like faculty details, teacher details, course details, and academic details. This project is made using **JAVA** while doing this project.
